PHISHING AWARENESS QUIZ

Choose the most appropriate answer for each question

1. What is phishing?

A. A method used to improve email security

B. An attempt to trick people into sharing information or performing unsafe actions

C. A type of software update

D. A system for blocking unwanted emails

2. You receive an email from a delivery company asking you to pay a small fee to release your parcel. You are actually expecting a delivery. What would you do?

A. Pay the fee because you are expecting a parcel

B. Open the payment link to check whether it looks genuine

C. Check the parcel status through the company's official website or app

D. Reply to the email asking for confirmation

3. An email appears to be from Microsoft, but the sender address is noreply@microsoftonline-verify.com. What makes this suspicious?

A. Microsoft never sends account-related emails

B. The domain imitates Microsoft but is not its official domain

C. The email uses the word "verify"

D. The message was sent automatically

4. Which of the following is the safest way to check a suspicious link?

A. Open it in incognito mode

B. Click it without entering any information

C. Forward it to a friend to test

D. Visit the organization's official website independently

5. Your manager sends an email asking you to urgently purchase gift cards for a client. The message uses their usual name and signature, but the email address is unfamiliar. What should you do?

A. Buy the cards because the signature matches

B. Reply to the email asking whether the request is genuine

C. Contact your manager using a phone number or channel you already trust

D. Ask the sender to send the request again

6. A suspicious email contains a link that receives zero detections on VirusTotal. Does this mean the link is safe?

A. Yes, because no scanner identified a threat

B. Yes, if the website uses HTTPS

C. No, a zero-detection result does not guarantee safety

D. No, because VirusTotal only checks attachments

7. You receive an unexpected attachment named `Payment_Receipt.pdf.exe`. What is the main concern?

A. The filename is too long

B. The file may be an executable disguised as a PDF

C. PDF files cannot be sent by email

D. The file was sent without a subject line

8. An email passes SPF, DKIM, and DMARC checks but contains an unusual link asking you to register on a dating website. What can you conclude?

A. The email is safe because authentication passed

B. The website has been checked for malware

C. The email must have come from a trusted company

D. The email passed authentication checks, but the link may still be unsafe

9. You receive an email stating that your work account will be disabled within 30 minutes unless you log in using the provided link. What is the sender most likely trying to achieve?

A. Encourage you to update your password regularly

B. Create urgency so you act without checking the message

C. Inform you about a scheduled maintenance period

D. Confirm that the email was sent by your IT department

10. Which is an example of multi-factor authentication (MFA)?

A. Using a password and a verification code from an authenticator app

B. Using two different passwords for the same account

C. Changing your password every month

D. Using a longer password

11. A coworker forwards you a suspicious email and says, "I think this is fake. Can you open the link and check?" What should you do?

A. Open the link on your phone instead of your work computer

B. Open the link in a private browser window

C. Avoid opening it and report the message through the appropriate channel

D. Ask another coworker to try it first

12. You clicked a suspicious link and entered your work password before realizing the website might be fake. What should you do first?

A. Wait to see whether anything happens

B. Delete the email and close the browser

C. Immediately inform IT/security and follow instructions to secure your account

D. Change your password the following week

13. A promotional email has no obvious spelling mistakes, uses a professional logo, and includes an unsubscribe link. Which statement is most accurate?

A. The email must be legitimate because it looks professional

B. The unsubscribe link confirms the sender's identity

C. A professional appearance does not prove that an email is trustworthy

D. The message is safe if it does not contain attachments

14. You receive an unexpected email asking you to confirm a bank transaction. The email includes a phone number and tells you to call immediately. What is the safest approach?

A. Call the number provided because phone calls are safer than links

B. Reply and ask the sender for more information

C. Use the bank's official app or a previously verified contact number

D. Forward the message to your personal email account

15. Your company's finance team receives an email requesting that future supplier payments be sent to a new bank account. The message appears to come from an existing supplier. What should happen before the payment details are changed?

A. The change should be approved because the supplier is already known

B. The finance team should confirm the change through a separate, established contact method

C. The change should be accepted if the email contains an invoice

D. The finance team should reply to the email requesting confirmation

16. An employee reports a suspicious email without clicking anything. Another employee says reporting was unnecessary because no damage occurred. Who is right?

A. The second employee, because reporting is only necessary after clicking

B. The second employee, because suspicious emails should simply be deleted

C. Neither employee, because only antivirus software can identify phishing

D. The first employee, because early reporting can help protect others
